

**ALP ENERGY** delivers  
*GREEN Hydropower to **ACB***

ALP ENERGY is a 100% certified form of green energy. The majority of this hydropower energy is produced by CNR (Compagnie Nationale de Rhône)

CNR operates 19 hydraulic power stations between Lake Geneva and the Rhône River. The full capacity of 3000 mw is certified as a 100% renewable source of energy.

As an ALP ENERGY user, ACB received certificates as a prove and guarantee of energy generated by renewable sources like wind, sun, water and biomass.

The accreditation includes the auditing by TÜV, approving the way the electricity is produced and is counting the amount of renewable electricity produced and sold.

***ACB reaching for a better environment***
